GRUNDFOS 

Powerful pumps for handling unscreened raw sewage

Grundfos offers a complete range of highly dependable, powerful sewage pumps, designed for handling unscreened raw sewage. With more than forty years' experience in providing specialised pumps and pumping equipment for all kinds of wastewater and sewage, we know better than anyone what our customers demand from a wastewater pump.

➤ High pump efficiency over time

Advanced technology makes the Grundfos pumps extremely efficient and highly dependable. Innovative features such as SmartTrim adjustment of the impeller clearance ensure long-term high pump efficiency and low life-cycle costs.

➤ Less down time

The inherent non-clogging design of our SuperVortex impeller pumps and the excellent solids handling capability of our channel impeller pumps guarantee maximum up time and substantial reduction in service costs caused by pump jamming or clogging.

➤ Life-long reliability

The Grundfos wastewater pumps are of a well-proven design that ensures life-long reliability even under the most difficult operation conditions.

At Grundfos we strive to maintain a close dialogue with our customers in order to constantly improve our pump designs and performance. Only this way are we able to build the long-lasting relationships on which our business is founded.

Installation options

Submerged installation on auto-coupling, types S and C

Submerged installation on auto-coupling system requires a base plate with a 90° bend, fixed to the bottom of the pit. When lowered into the pit along the guide rails, the pump automatically connects to the base plate. The flexible neoprene SmartSeal ensures a leak-proof connection between the pump and the auto-coupling.

Type S:

To prevent sedimentation of sludge at intermittent operation, we recommend a stop level corresponding to the top of the pump housing. For sufficient cooling at continuous operation, the liquid level must be kept above mid-motor level at all times.

Type C:

Motor cooling is independent of the pumped liquid level.

Submerged installation, portable, types S and C

Certain applications, such as construction sites, require portable submersibles. Where a portable submersible is required, hoses of varying lengths and materials can be supplied.

Type S:

To prevent sedimentation of sludge at intermittent operation, we recommend a stop level corresponding to the top of the pump housing. For sufficient cooling at continuous operation, the liquid level must be kept above mid-motor level at all times.

Type C:

Motor cooling is independent of the pumped liquid level.

Vertical dry installation, type D

The Grundfos sewage pumps can be installed vertically or horizontally to suit specific application arrangements. The pumps are 100% watertight, allowing for dry installation with the workspace around the pump remaining clean and dry. If an unexpected flooding should occur, the Grundfos pumps are fully flood-proof.

Motor cooling is effected by internal cooling of the pump.

Horizontal dry installation, type D

Horizontal dry installation improves the overall efficiency of the pumping system as unnecessary components and bends are avoided. As the system takes up slightly more space than a vertically installed pump, the feasibility of horizontal dry installation depends on the floor space available.

Motor cooling is effected by internal cooling of the pump.

Grundfos SuperVortex impellers

A unique impeller design

The unique design of the Grundfos SuperVortex impellers provides high pumping efficiency and less downtime. With a flow range from 4 l/s, the Grundfos SuperVortex-impeller pumps are the optimum solution for all small pumping stations.

No clogging or jamming

In a SuperVortex-impeller pump, the flow is entirely outside the impeller. The design of the impeller ensures that long fibres, rags, etc. pass freely through the pumps without getting caught and without causing clogging or jamming. This means less downtime and, consequently, reduced service costs and higher pumping efficiency.

The design of the SuperVortex-impeller pumps also prevents the common problem of jamming between wear rings. A Grundfos SuperVortex-impeller pump needs no wear rings!

Conventional vortex impeller

In pumps fitted with a conventional vortex impeller, turbulent disturbance is liable to form around the impeller. This will disrupt the flow pattern and result in lower pumping efficiency and reduced head.

Grundfos SuperVortex impeller

The liquid passes freely outside the impeller without any turbulent disturbance.

Full performance curve without operating limitations and vibrations

Due to the special power characteristics of the Grundfos SuperVortex-impeller pumps, it is possible to run the pumps right up to the maximum flow on the curves without any risk of overloading the motor. The steep performance curve means minimal flow fluctuation with varying heads.

Grundfos channel impellers

Large free passage for superior solids handling

Compromising on the ability to handle solids in order to obtain higher pumping efficiency substantially increases the risk of clogging. More clogging means more downtime and increased operating costs. The Grundfos channel-impeller pumps provide high efficiency and excellent non-clogging capabilities. The channel impellers are designed with a large free passage \varnothing 80 mm.

Self-cleaning impeller

On Grundfos wastewater pumps smaller than 12 kW, the bottom part of the channel impellers feature specially designed auxiliary vanes. These vanes are designed to create a powerful flow that keeps the clearance between the impeller and the pump housing free from solids or fibres.

Semi-axial impeller design with long vane

The length of an impeller vane is a key factor in determining the length of fibres that can pass through a pump without getting caught. The Grundfos channel impellers are of a semi-axial design with extra long vanes. This provides maximum performance and eliminates problems with fibres or rags getting caught in the impeller.

Performance overview and general data

Performance overview

- ① SuperVortex impeller
ranges 34 – 42
- ② SuperVortex impeller
range 42
- ③ Channel impeller
range 42

Operating conditions and maximum starting frequency

Pump application is restricted by the following limits:

- Maximum ambient temperature and pumped liquid temperature: +40°C
- Storage temperature range: –30°C to +60°C
- Maximum installation depth: 20 m
- Voltage tolerances: 60 Hz 380 V - +/-10%
50 Hz 400-415 V - +/-10%

Pump starting frequency should not exceed 15 starts per hour.

For short periods of time, a starting frequency of up to double the recommended is permissible.

Type Key

Ex. SV024CL	S	V	-	02	4	C	L
Type range S = GRUNDFOS submersible wastewater pumps							
Impeller type 1 = Single channel impeller, V = SuperVortex							
Motor specification [] = Non-explosion-proof A = ATEX, 50 Hz, A = Explosion-proof, 60 Hz							
Motor power Motor power in kW							
Motor pole number							
2 2-pole				50 Hz	60 Hz		
4 4-pole				3000	3600		
				1500	1800		
Pump generation [] = 1st generation A = 2nd generation B = 3rd generation, etc. The generation code identifies pumps that differ in design but are similar in power rating							
Head [] = No classification, E = Extra-low, L = Low, M = Medium, H = High, S = Super-high							

The S pumps are identified by the type code stated in the confirmation of order and other documentation supplied with the pump. The code consist of the items shown in the table below.

Accessories

Pos.	Picture	Description	Dimensions	DN 80	DN 100	Product number
1		Auto-coupling system complete with guide claw, base plate and upper guide-rail holder. With gaskets and bolts. Cast iron, epoxy-coated.	DN 80	•		96090993
			DN 80/DN 100	•		96102240
			DN 100		•	96090994
2		Ring stand with flanged 90° elbow and hose connection. With bolts, nuts, gaskets and anchor bolts. Cast iron, epoxy-coated.	DN 80/DN 80/3"	•		96102254
			DN 100/DN 80/3"	•		96102313
			DN 100/DN 100/4"		•	96102255
		Ring stand with flanged 90° elbow and outside thread connection. With bolts, nuts, gaskets and anchor bolts. Cast iron, epoxy-coated.	DN 80/DN 80/R 3	•		96102381
			DN 100/DN 80/R 3	•		96102382
			DN 100/DN 100/R4		•	96102383
3		Base stand for vertical dry installation, including 90° elbow. With bolts, gaskets and anchor bolts. Galvanized steel.	DN 100		•	96102259
4		Bracket for horizontal dry installation. With bolts, gaskets and anchor bolts. Galvanized steel.	DN 100		•	96255509
5		10° adaptor with lift function for Grundfos base plate UV 35579 incl. guide claw, bolt, nuts and gasket.		•		96572290
					•	96294872
6		Adaptor for Grundfos base plate UV 35586 B incl. guide claw, bolt, nuts and gasket.		•		96572291
					•	96572292
7		Lifting chain with shackle. With certificates. Galvanized steel.	6 m	•	•	96497465
8		AMD.07.18.1410 mixer for flushing in pump sump.				Contact Grundfos

The Grundfos wastewater range

S range 5 – 29 kW

Brochure covers the Grundfos range of submersible channel-impeller pumps from 5 kW up to 21 kW and Super-Vortex pumps up to 29 kW. All designed for handling unscreened raw sewage. Available in 50 Hz and 60 Hz versions.

S range 15 – 155 kW

Brochure covers the Grundfos range of sewage pumps from 15 kW up to 155 kW for handling of raw sewage in heavy-duty applications. Available in 50 Hz and 60 Hz versions.

S/SA ranges up to 520 kW

Brochure covers the Grundfos range of super-heavy-duty channel pumps, axial flow pumps, and propeller pumps from 7.5 kW up to 520 kW.

SE range 90–220 kW

Brochure covers the Grundfos range of updated heavy-duty submersible sewage pumps. Includes descriptions of the new built-in sensors.

SRP range 3.0 – 24 kW

Brochure covers the Grundfos range of SRP submersible recirculation pumps for wastewater treatment plants and flood control. Available in 50 Hz and 60 Hz versions.

SEN range 1.0 – 21 kW

Brochure covers the Grundfos range of heavy-duty stainless steel pumps (SEN) for aggressive and corrosive environments.

Multilift M, MD, MDV, and MD1 ranges

Brochure covers Grundfos lifting stations for individual as well as multi-user applications.

LC/LCD Ranges – level controllers

Brochure covers the Grundfos range of controls for the wastewater pumping systems.

AMD, AMG, and AFG ranges

Brochure covers the new range of mixers and flowmakers for optimal control of liquids and solids throughout the wastewater treatment process.

SEG range 0.9 – 4.0 kW

Brochure covers the Grundfos range of sewage grinder pumps (SEG) for pumping of wastewater with toilet discharge.

DP, EF, SE1 and SEV ranges 0.6 – 2.6 kW

Brochure covers the Grundfos range of submersible channel-impeller and Super-Vortex-impeller pumps from 0.6 to 2.6 kW. Designed for handling drainage, effluent and sewage from private dwellings.

Prefabricated pumping stations

Brochure covers the Grundfos range of prefabricated pumping stations for collecting and removing drainwater, surface water, domestic and industrial wastewater and sewage.

SE1 and SEV ranges 1.1 – 11 kW

This brochure describes the innovative SEV/SE1 pump lines. Fitted with Super-Vortex or single-channel impellers, these pumps can meet approximately 80% of all wastewater pumping needs.
